 **Database Distribution**

Service → Database Mapping

Service Primary DB Secondary Cache
----- ----- ----- -----
Auth Service PostgreSQL - Redis
Product Service PostgreSQL Elasticsearch Redis
Order Service PostgreSQL - Redis
Payment Service PostgreSQL - Redis
Delivery Service PostgreSQL QdrantDB Redis
AI Service QdrantDB ClickHouse Redis
Analytics Service ClickHouse - Redis
Blockchain Service Hyperledger PostgreSQL -
Notification Service Redis PostgreSQL -

 **Event-Driven Communication**

Event Types

```typescript

```
// User Events
UserCreatedEvent
UserUpdatedEvent
UserDeletedEvent
```

// Product Events

```
ProductCreatedEvent
ProductUpdatedEvent
ProductDeletedEvent
ProductViewedEvent
```

// Order Events

```
OrderPlacedEvent
OrderConfirmedEvent
OrderShippedEvent
OrderDeliveredEvent
OrderCancelledEvent
```

// Payment Events

```
PaymentInitiatedEvent
```

```
PaymentProcessedEvent
PaymentFailedEvent
PaymentRefundedEvent
```

```
// Delivery Events
DeliveryAssignedEvent
DeliveryStartedEvent
LocationUpdatedEvent
DeliveryCompletedEvent
...

```

```
🔒 **Security Architecture**
```

```
Authentication Flow
```

```
...
Client → Kong Gateway → JWT Validation → Service Mesh (mTLS) → Microservice
...

```

```
Service-to-Service Communication
```

```
...
Service A → Istio Sidecar → mTLS → Istio Sidecar → Service B
...

```

```
📈 **Scalability Patterns**
```

```
Horizontal Scaling Strategy
```

```
```yaml  
# Kubernetes HPA Configuration  
apiVersion: autoscaling/v2  
kind: HorizontalPodAutoscaler  
metadata:  
  name: product-service-hpa  
spec:  
  scaleTargetRef:  
    apiVersion: apps/v1  
    kind: Deployment  
    name: product-service  
  minReplicas: 2  
  maxReplicas: 10  
  metrics:  
    - type: Resource
```

```
resource:  
  name: cpu  
  target:  
    type: Utilization  
    averageUtilization: 70  
...  
---
```

🎯 **Migration Strategy**

Phase 1: Infrastructure Setup (Week 1-2)

- Setup Kubernetes cluster
- Deploy Kong Gateway
- Configure Istio Service Mesh
- Setup databases (PostgreSQL, Redis, ClickHouse, QdrantDB)

Phase 2: Core Services (Week 3-4)

- Migrate Auth Service
- Migrate Product Service
- Migrate Order Service

Phase 3: Advanced Services (Week 5-6)

- Implement Payment Service
- Implement Delivery Service
- Implement AI Service

Phase 4: Analytics & Blockchain (Week 7-8)

- Setup Analytics Service
- Implement Blockchain Service
- Implement Notification Service

Phase 5: Testing & Optimization (Week 9-10)

- Integration testing
- Performance testing
- Security audit
- Production deployment

```
---
```

📈 **Monitoring Stack**

```
...
```

Logs: Loki → Grafana
Metrics: Prometheus → Grafana
Traces: Jaeger
APM: OpenTelemetry
Alerts: Alertmanager → Slack/PagerDuty
